

Executive Summary

Atlantic France Content Intelligence Analysis

Project Overview

This project analyzes content trends within the France Top 50 music playlist using data analytics and interactive visualization techniques. The objective is to understand audience preferences, content characteristics, release strategies, and ranking behavior through exploratory data analysis and dashboard-driven insights.

Key Findings

- The playlist contains a combination of explicit and clean content, indicating varying levels of audience acceptance.
- Singles represent a significant portion of playlist entries, reflecting current digital music consumption trends.
- Song durations are concentrated within a limited range, suggesting preferred listening patterns among users.
- Album size demonstrates limited influence on popularity and ranking performance.
- Content characteristics vary across Top 10, Top 25, and Top 50 ranking categories.

Business and Policy Relevance

The analysis provides valuable insights into content consumption behavior and can support evidence-based decision-making for digital content platforms, media regulators, cultural agencies, and music industry stakeholders.

Deliverables

- Data preprocessing and exploratory analysis
- KPI-based content intelligence framework
- Interactive Streamlit dashboard
- Actionable recommendations for content strategy and monitoring

Conclusion

The project demonstrates how data analytics can transform playlist data into meaningful intelligence regarding audience behavior, content trends, and release strategies. Interactive dashboards further enhance accessibility and support informed decision-making.
